Limits of Land Districts

Explanations.

The township lines show how far the public surveys have progressed in the several land States and Territories.

*Townships near the limits of the surveys marked with a * and all townships around which the exterior lines are drawn, whether marked with the cross or not, are subdivided.*

Townships not subdivided are designated by an ×.

The dotted lines indicate proposed surveys.

This map being especially designed for Government use in connection with the public surveys, is for the sake of convenience, and on account of its diminutive scale, drawn upon a rectangular projection.

Although the Township lines of the government surveys are extended over nearly the whole of the States of Missouri, Arkansas, Louisiana, and Florida, large portions of these States are covered with irregular private claims. The same is also true to some extent in Alabama, and some of the other States.
